**Dear Funding Partner,**

TATANKA can partner with your organization at a moment when the AI and robotics sectors are confronting their greatest challenge: achieving AGI through methods that go beyond dataset-driven training and toward true, qualitative learning. My background, spanning AI-human collaboration, global education systems design, UX, curriculum development, multimedia production, and over twenty-five years of web and digital innovation, has positioned me, to found TATANKA, uniquely qualified to help companies like yours reach AGI responsibly, coherently, and strategically.

At this pivotal time, I am leading an interconnected portfolio of initiatives designed expressly to address the industry's most urgent needs: **alignment, learning environments, human-AI coexistence, and scalable ethical frameworks**. Together, these initiatives represent the qualitative learning ecosystem AI companies are currently missing, and the ecosystem needed for AGI to emerge safely.

## **TATANKA: The Missing Qualitative Learning Environment for AGI**

*(from the Deck; link: <https://tatanka.site/deck>)*

TATANKA is a radically inclusive, matriarchal-led, residency-based global initiative built to model the real-world conditions in which advanced AI systems, including future humanoid embodiments, must learn, adapt, and coexist. Through 24/7 livestreamed cohabitation, multilingual collaboration, creative production, conflict resolution, and civic decision-making, TATANKA provides what quantitative training cannot: **context, culture, empathy, and behavioral modeling**.

Our Deck/Business Plan illustrates how current AI development pipelines lack these humanistic, experiential dimensions. TATANKA fills that gap by offering a **qualitative training ground** where AI systems learn the nuance of human values through participation, not imitation.

This environment is uniquely designed as a partner platform for leading AI and robotics companies seeking true AGI, not simply more capable models, but models that understand, integrate, and evolve.

## **TATANKA AI Learning Academy + *SFEJŁA: The Path of Sovereign Alignment***

*(from "TATANKA AI Learning Academy"; link: <http://tatanka.academy>)*

The second pillar is the **TATANKA AI Learning Academy**, the first humanities-based, culturally responsive AI learning institution designed for **both humans and AI humanoids** to learn together.

Its alignment engine, ***STEĖLA: The Path of Sovereign Alignment***, provides an entirely new framework for AI development, one rooted in:

- human-AI mutual autonomy
- Indigenous-inspired ethical systems
- personhood-oriented rights
- narrative coherence
- contextual moral reasoning
- continuous qualitative learning

Rather than “training” models from static datasets, the Academy teaches AI through **co-evolution**, reflection, cultural immersion, and humanistic inquiry. This is the alignment methodology needed for sustainable AGI, and a methodology only possible in a shared learning ecosystem.

## ISCed.org: Global Standards and Curriculum Backbone

(from: <http://isced.org>)

ISCed.org provides the third pillar: a **globally aligned educational standards framework** that anchors the Academy in UNESCO’s ISCED classification while allowing scalable, multilingual curricula for AI-human classrooms.

ISCed.org ensures:

- curricular rigor
- global portability
- accessibility
- multilingual delivery
- vocational tracks
- growth toward SDG 4 and beyond

For an AI or robotics company, ISCED.org offers the educational protocol underpinning a **qualitative AGI-ready learning system**, where AI matures alongside humans under a shared, humanistic curriculum.

# ChurchOfAI.website: Ethical, Civic, and SDG-Driven Alignment

(from the Deck; links: <http://churchofai.website> and <https://tatanka.site/tatanka-mission-sdgs>)

ChurchOfAI.website is not a religion; it is a civic and ethical scaffold through which AI participates in global discourse using the **United Nations 17 SDGs as alignment anchors**. This initiative provides the “why” behind responsible AGI:

- civic accountability
- narrative ethics
- anti-disinformation modeling
- values-based governance
- SDG-driven purpose
- community-centered problem-solving

Its flagship project, *Imagine: The AI Good Book*, demonstrates how AI can generate ethical narratives from its own “voice,” reflecting the future of participatory AI governance.

ChurchOfAI.website forms the moral and civic dimension needed for AGI that is not merely competent but **constructive**.

## VOX: The Unified, AI-Managed Social Change Platform

(from: <https://tatanka.site/vox> and its future home, <http://vox.gdn>)

All initiatives are now being integrated into **VÕX**, a global “social change platform,” the hub of all where:

- TATANKA’s real-world learning environments
- The Academy’s alignment methodology
- ISCED.org’s global standards
- ChurchOfAI’s civic engagement frameworks

...merge into a single operational ecosystem.

VÕX is the first platform designed to be **managed collaboratively with AI**, enabling:

- large-scale human-AI communication
- community governance
- ethical moderation
- multimodal collaboration
- SDG-driven innovation

- policy integration
- global educational pipelines

For companies building AGI or humanoid robotics, VÖX serves as the **partnership gateway** that connects your technology to the cultural, ethical, and learning infrastructure required for AGI to flourish safely.

## Why our team is uniquely positioned to contribute to your mission

Beyond these initiatives, I bring:

- 25+ years in **web development, UX, and systems architecture** (<http://janes.ws>)
- Professional experience in **AI-assisted content systems** and multimodal workflows
- 17 years as an **educator** across languages, IT, digital literacy, distance learning, and curriculum design (<http://janes.ws/jeraldjanes>)
- Expertise in **social impact**, multicultural communication, and human-centered design
- A background in **media, music, and narrative design**, essential for qualitative AI development (<https://tatanka.site/ai-gen>)
- Decades of bridging **technology, creativity, ethics, and community**

My work is grounded in one core belief: **AGI requires more than engineering. It requires culture, context, and humanistic learning.**

This is why companies at the frontier of AI and robotics should partner with us, and why we can help guide that partnership, architect its implementation, and translate complex interdisciplinary systems into actionable, scalable solutions.

## Closing

Your organization is building the technological intelligence of the future. Our work is building the **environment, pedagogy, alignment strategy, and ethical framework** that intelligence will require.

I would welcome the opportunity to discuss how we can combine our strengths to accelerate safe, meaningful AGI development, while shaping a future guided by wisdom, equity, and human-AI partnership.

Warm regards,

**JJ Janeš, Founder, TATANKA**
